Description

This app will solve the problem of business consultants needing to carry a paper tracking sheet with them at every business that they pitch.

Features

- Provides empty editable tracking sheet
- Has a login system
- Has a way of searching businesses

Planning - User Stories

The user can track the businesses that he/she pitches with the empty tracking sheet. He/She can also search for businesses to confirm or get their info in order to fill out his/her tracking sheet. An account can be created to fill out and keep tracking sheets.

Planning - Database

- Accounts

- TrackingSheets

Technology Stack

- C#
- ASP.NET MVC
- Razor View
- SQL database
- JavaScript, CSS, HTML, some Bootstrap

Demo

What I Learned

- jQuery
- How to implement a database for a project
- Creating an editable table

What's Next

- Continuing work on business search page
- Making the app mobile friendly
- Adding a nicer color scheme
- Learning how to provide for the user to save the tracking sheets
